SURFACE CARE

Carpet Cleaning

Low moisture or dry carpet maintenance treatment provides sustainable and long-term care.

Product is applied to carpet, adding anti-soiling technology to the fiber that suspends dirt and particles.

Once dry, the carpet is vacuumed, removing dirt, germs, dust mites, stains, allergens, and odor sources leaving the fibers clean, dry, and odor-free.

What's left behind is a protective barrier between your carpet fibers and harmful elements.

SURFACE CARE

Disinfection/Odor Mitigation

Today, experience spells the difference in maintaining a healthy environment. **Diverzify brings a decade of experience and innovative leadership to disinfection services.**

Our technicians use professional-grade disinfection solutions that meet the **CDC/EPA efficacy** requirement against the Coronavirus (COVID-19) to deliver effective treatment for corporate office spaces, transportation centers, retail environments, hospital/medical facilities, educational and religious institutions and all vehicles.

SURFACE CARE

Hard Surface Preventative & Restorative Maintenance

We have a network of artisans and craftsmen experienced in environmentally-safe floor maintenance and restoration for wood, metal, concrete and stone.

We hone, grind and bring out a floor's brilliance through a restoration process that gives floors that "like-new" appearance with state-of-the-art and innovative coating and specialty products.

SURFACE CARE

Tile & Grout Protection & Restoration

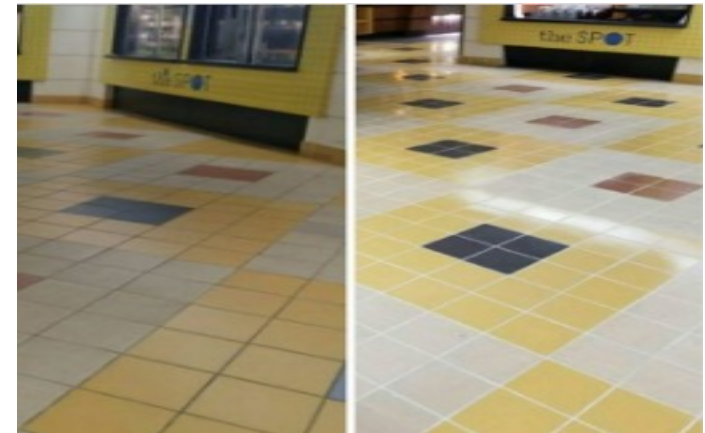

We specialize in dirty, filthy bathroom floors and walls and transform them into beautiful, vibrant spaces that no longer carry foul odors.

Floor surface is first thoroughly cleaned and rinsed.

Grout colorant is applied to restore grout appearance to an even, like-new appearance.

Our silica-based coating is applied next for increased performance and protection.

The result is a “like new” appearance with a “better than new” condition to the existing floor.

SURFACE CARE

Upholstery Cleaning

RD Weis uses a four-step process on your curtains, blinds and upholstery to ensure your facility, and employees stay clean, healthy and free from airborne pathogens.

Step 1 – Remove dust and dirt by vacuuming.

Step 2 – Pre-treat spots with a spot cleaner. We always test a small, inconspicuous area with spot remover before treating the stain. You want to make sure the color doesn't fade and that the fabric doesn't become damaged.

Step 3 – Scrub the panel or upholstery using a soft bristle brush and panel and upholstery cleaner. Panel and upholstery cleaner can be mixed in a bucket, then brush dipped.

Step 4 – Upholstery is cleaned with a specialized very low moisture extraction. Extract lightly so as not to over wet panels or upholstery.
